

SUMMARY

Senior FullStack Engineer with **6+ years** of web development experience, including **4+ years** architecting backend systems for high-load, distributed platforms. Built systems that process **~1,000 transactions/second** (peak **~3,000/second** under load), cut latency by **~57%** through a redesigned message-queuing pipeline, and brought validation time under **400ms** — down from 1,000ms — under heavy concurrent load (200–500 concurrent requests). Deep hands-on expertise in **C#, ASP.NET Core, ABP Framework, PostgreSQL, Kafka, Redis, and gRPC**, applying OOP, Domain-Driven Design, and Clean Architecture to build maintainable, domain-centric microservices. Comfortable owning a system end-to-end — from database design to API gateway — and recently extended that ownership into people leadership as an Engineering Manager leading a **9-person** team.

KEY SKILLS

BACKEND - C#, ASP.NET Core, ABP Framework - EF Core, REST, gRPC - FastAPI, Flask, Node.js, Spring	DATA & MESSAGING - PostgreSQL, SQL Server, MongoDB - Redis, Kafka, SignalR, Socket.IO LANGUAGES - C#, SQL, TypeScript - Python, Java	FRONTEND - Angular, Next.js, React PRACTICES - Docker, Git, Agile/Scrum - Team Mentoring
ARCHITECTURE - Microservices, DDD - Clean Architecture - Event-Driven Design		

WORK EXPERIENCE

Engineering Manager

MISA Group — HRM Solutions

Mar 2026 – Sep 2026

- Promoted to Engineering Manager after 8 months as Senior Developer, staying hands-on in architecture decisions and code reviews across the HRM platform.
- Directed technical decisions for a **9-person** cross-functional team (8 engineers mentored directly, plus 1 QC).
- Improved on-time sprint delivery rate from **65% to 90%** within the first five months as Engineering Manager, through structured sprint planning, stand-ups, reviews, and retrospectives — a disciplined Scrum cycle.
- Designed and directed the rollout of an in-house **AIDD (AI-Driven Development) plugin suite: BaKit** for business-analysis automation (cut documentation drafting time from ~5 to ~2 days, **~60% faster**, across 70 documents drafted in June–July 2026); **DevKit** for AI-assisted coding (lifted developer output by **~63%**, from 8 to 13 story points/sprint per developer, across 8 developers over 4 sprints); and **QcKit** for automated test generation (automated **~87%** of test cases — 260/300 — within two months of rollout).
- Set and enforced reliability and performance standards across the platform's high-load production systems.

Focus: Architecture, Clean Architecture, Microservice, Kafka, System Design, Agile/Scrum

Senior Backend Developer

MISA Group — HRM Solutions

Jul 2025 – Mar 2026

- Human Resource Management System** — a multi-module HR platform serving a **20-person** cross-functional team.
- Led a **4-engineer** team designing and building the Objectives & Evaluation modules, with reliable data synchronization from third-party HR systems.
- Built a centralized notification system with configurable email templates, delivering across **multiple channels** and business domains without cross-channel bottlenecks.
- Designed a No-code / Low-code configuration mechanism that shortened partner deployment time and gave non-technical staff more flexibility to configure the platform themselves.

Tech: C#, Angular, Clean Architecture, Microservice, Redis, Kafka, PostgreSQL, SignalR, Agile/Scrum

Senior Backend Developer

Jan 2023 – Jun 2025

Truong Minh Thinh JSC

- **Order Management System** — processed **~1,000 orders/second** on average (peak **~3,000/second** during promotion/flash-sale spikes) from partner platforms with real-time intake; redesigned the message-queuing pipeline (Kafka partitioning + Saga pattern + Redis distributed lock + Redis-based quota), cutting average latency from ~700ms to ~300ms (**~57%**), measured over the first month post-pilot; built webhook forwarding with automatic retries for resilient partner delivery. Team of 4, wearing three hats: Backend Developer, Database Designer, and Analyst. **Tech:** C#, ABP, Microservice, PostgreSQL, Redis, Kafka, Webhook, gRPC
- **Promotion Management System** — designed atomic quota validation to prevent over-application under high concurrency, cutting validation time from **1,000ms to under 400ms (~2.5x faster)** under 200–500 concurrent requests, for a 10-person team. **Tech:** C#, ABP, Microservice, PostgreSQL, Redis, Kafka, gRPC
- **Loyalty Management System** — delivered sub-second point accrual across channels for end users, with reward redemption via product or QR-code scan. Team of 10. **Tech:** C#, ABP, Microservice, PostgreSQL, Redis, Kafka, Webhook, gRPC
- **Product Distribution System** — owned the stack end-to-end (backend, Angular frontend, dev-ops) for a 10-person team, routing traffic through a YARP API gateway across microservices. **Tech:** C#, ABP, Angular, TypeScript, PostgreSQL, Redis, Kafka, Firebase, MongoDB, YARP Gateway, Agile/Scrum

Junior Developer

Jan 2021 – Dec 2022

Truong Minh Thinh JSC

- **Centralized Messaging (Upgrade)** — upgraded the legacy codebase, improving system performance and reliability. Team of 4. **Tech:** Python, FastAPI, MongoDB, Angular, TypeScript
- **Product Management & Collection System** — built a scraping pipeline collecting product data from domestic and international e-commerce platforms. Team of 5. **Tech:** Python, FastAPI, MongoDB, Angular, Selenium, Socket.IO, Agile/Scrum

Intern

Jul 2020 – Dec 2020

Truong Minh Thinh JSC

- **Centralized Messaging Management System** — aggregated messages from multiple social media platforms into a single management system. **Tech:** Python, Flask, Angular, TypeScript, MySQL, Agile/Scrum

PERSONAL PROJECTS

- **SIM Management System** — centralized platform for managing and controlling SIM banks, integrating GSM hardware with a web dashboard. **Tech:** Python, FastAPI, Flask, MongoDB, Linux, Next.js, TypeScript, Prisma, GSM, Redis
- **Household Electrical Appliances Website** — e-commerce site for household appliances, covering product catalog and order management. **Tech:** Next.js, TypeScript, SQL Server, IIS, Prisma, SSR
- **Steel Materials Website** — e-commerce site for steel materials, covering product catalog and order management. **Tech:** Next.js, TypeScript, SQL Server, IIS, Prisma, SSR

EDUCATION

FPT Polytechnic College, Da Nang

Aug 2018 – Dec 2020

Software Applications

- GPA: 8.9 / 10

LANGUAGE

English: Intermediate · Vietnamese: Native
